

Deposits potatoes individually into slicers to improve efficiency and reduce scrap.

Slicer Auger Feeders easily mount between your Slicer Feeder and slicers to improve product quality and yield.

Superior slicing

Produce more uniform slices and improve finished chip quality by metering potatoes single-file into the slicers.

Increase production

Without clogging, slicers operate at peak efficiency improving yield from raw potatoes by producing more saleable product and less scrap.

Cleaner operations

Fewer fines and partial slices pass through the washer and fryer, reducing cleaning costs and unnecessary oil absorption.

Rugged stainless steel washdown construction.
Mounting hardware is optional.

Variable speed drive

Dual metering augers

Discharge chute to slicers

Constant improvement and engineering innovations mean these specifications can change without notice.
